

TECHNISEM

Carrot AMAZONIA

Daucus carota L.

" Variety to high yield adapted to hot season "

This Kuroda type has uniform shape and smooth root. Its orange color is deeper than the common Kuroda carrot. Its core is homogeneous and small. The conical roots are harvestable in 90-95 days after sowing. Plants are vigorous and present a good tolerance to Alternaria Leaf Blight.

Root

- Kuroda type
- 16 to 18 cm long
- Deep orange color outer skin
- Deep orange-red small core

Leaves

- Vigorous

Maturity

- 90 to 95 days after sowing

Resistance

- Good tolerance to Alternaria Leaf Blight
