

# Watermelon KAOLACK

*Citrullus Lanatus* L.

" High yield and good behaviour under different conditions! "

Round fruits of KAOLACK are around 5 to 6 kgs, with a light green skin colour, finely medium green striped. The red flesh colour is crunchy and sweet, well-appreciated by consumers. With a high yield and a good behaviour under different conditions (thanks to a good tolerance to Anthracnose), KAOLACK is famous in subsaharian countries.

## Fruit

- Round shape
- Light green skin colour, finely medium green striped
- Average weight: 5 to 6 kgs
