

# Carrot SHAKIRA F1

*Daucus carota* L.

“ Finally a Nantes carrot that resists to heat! ”

Nantes type, hybrid SHAKIRA F1 has an excellent heat tolerance. Its homogeneity will allow you to produce unmatched quality carrots.

## Plant

- Intermediate resistance to Alternaria Leaf Blight
- Good resistance to Powdery Mildew
- Moderate foliage

## Root

- Cylindrical Nantes type
- 18 to 19 cm long
- Orange external colour
- Smooth skin with very small spot

## Maturity

- 110 to 115 days after sowing

The use of a seeder is recommended for the variety SHAKIRA F1. Indeed, a mechanized sowing allows a controlled density, which is the key for a good carrot production quality.

Thanks to this association and a good soil preparation, you will:

- Reduce the time of thinning out and weeding => reduce expenditures
- Reduce the amount of seeds used => reduce expenditures
- Get higher yield => gain more money
- Optimize production surfaces => save space
- Have a higher quality production => facilitate sales
